

Made for the trade

REACH Directive Policy

Dear Customer, As you may or may not be aware the directives according to REACH, ELV, RoHS and WEEE are changing as of 21st September 2017 and we therefore wanted to take this opportunity to advise of our current position and intentions moving forward. Under the REACH Directive Hexavalent Chromium (CrVI) is listed as an SVHC (Substance of Very High Concern) and deemed as carcinogenic when inhaled or ingested if the concentration is more than 0.1% w/w. We have worked closely within our supply chain to ensure the fixings and fasteners we supply comply with the aforementioned directives in order to ensure ourselves, our customers and the end-user can continue to supply and use our products with peace of mind and more importantly with no risk. By working with our suppliers plating factories we have managed to ensure the levels of CrVI are below the REACH limit and are compliant. We have also had our products independently tested with SGS laboratories to endorse our factories results. Should you require any further information or would like to discuss this in more detail please do not hesitate to contact us.
